

Forklift Fork Positioner

Fork Positioner for Forklift - A fork positioner is a tool made out of high quality materials intended to be able to endure the most challenging procedures and work environments. This piece of equipment can enable the individual driving to be able to operate the forks hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the arms or the entire load in order to facilitate much more accurate carrying and position in a faster and much more effective way.

The fork pocket is rather unique and enables the person operating it to safely swing the forks into position without any fear of damaging the positioning cylinders. This could allow the driver the alternative to be able to perform independent or simultaneous fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages could be converted into fork positioners on existing units.
